POWERFUL RUGGED HIGH TECH 5V TO 24V CHARGER POWERGORILLA

“ A rugged, lightweight, hi-tech addition to any short or long range trek. Military proven within the Northern Hemisphere to charge and competently run a laptop for an additional 6 hours – a must-have, economic power solution. ”

Wo2 Karl Gilmore

The powergorilla keeps laptops powered in some of the world's most remote corners.

On location, on the road or back home, the powergorilla's high density Lithium Polymer battery is capable of charging everything from your laptop to your mobile phone, and delivers output across the spectrum of 5v, 8.4v, 9.5v, 12v, 16v, 19v and 24v.

The finely tooled aluminium casing and rubber side grips makes the powergorilla not only superb to handle but built to last.

ADDITIONAL FEATURES

- Provides 2-6 hours of laptop/notebook power
- Charge via AC mains or the solargorilla (not supplied)
- Adaptors supplied for all major laptop and mobile brands (Apple MagSafe and iPad connector not included)
- Multi-voltage functionality and simultaneous charging via 5v USB

RUGGED WATER RESISTANT 5V & 24V SOLAR PANEL SOLARGORILLA

“ During the Team Momentum team-building exercise in Kenya, Powertraveller products were the only source of power for the trip. Their compact size, ease of use and minimal maintenance requirements made them an indispensable part of the kit list. ”

**Darby Allen,
Team Momentum**

In the desert, on safari, up a mountain or simply on the move, the solargorilla portable solar charger is the perfect companion to the powergorilla and minigorilla. The solargorilla is ideal for anyone who finds themselves away from mains power for long periods or where there isn't a reliable power source.

Harnessing energy from under the sun, the solargorilla works via two technically advanced solar panels to ensure superb power and reliable performance, all housed in tough outer casing.

Gives 5v and 20v power directly from the sun

Non-reflective solar panels

Tough rubberised casing

Unique clam-shell design protects the solar panels when stored

COMPACT RUGGED HIGH TECH 5V TO 19V CHARGER MINIGORILLA

“The minigorilla is an invaluable piece of kit. While climbing Everest I needed a reliable charger source for my phone, camera, video cameras, laptop and ipod. The minigorilla worked brilliantly even up to 7,300m and I was able to charge my camera and video camera - something I’ve never been able to do so high before. The kit worked well in the extreme conditions and was tough enough to withstand the harsh environment.

Squash Falconer, ”
Adventurer and
Mountaineer

Slimline, lightweight and designed to answer the power needs of netbook users, this high powered portable charger features the latest high density Lithium Polymer battery technology. It delivers output across the spectrum of 5v, 8.4v, 9.5v, 10.5v, 12v and 19v making it ideal for a whole host of other devices too and, like its bigger brother, the minigorilla is built to last.

WATERPROOF RUGGED SOLAR POWERED CHARGER POWERMONKEY EXTREME

Five years in development, the powermonkey extreme is the result of feedback from real power users in some of the most remote locations on the planet and embodies Powertraveller's total understanding of customer requirements in the outdoor and adventure travel market. The powermonkey extreme is IP67 rated meaning it's waterproof for up to one metre and shock resistant – perfect for outdoor, marine and adventure enthusiasts, as well as military and aid agencies.

The powermonkey extreme features a rugged, clam-shell design solar panel which includes Maximum Power Point Tracker (MPPT) technology allowing a full recharge of the powermonkey extreme within 15 hours in optimum light conditions. The solar panel also fully supports Apple iPhone/iPod, mobile phones and other 5v devices.

Like the powergorilla and minigorilla, powermonkey extreme offers two output channels – USB and DC ports enabling simultaneous charging of Apple iPad and other tablet computers via DC and 5v charging via USB.

“ I’ve just received my powermonkey and must say I’m very impressed with it. Even the packaging is impressive! I showed it to a client today who travels a lot and he is going to buy one too! ”

Customer feedback

The iconic powermonkey classic is the lightest, most versatile all-round charger for its size. It’s ten times more powerful than a conventional battery which means it can charge a mobile phone up to three times between charges.

The powermonkey classic is streamlined with a smooth silk lacquered finish and is available in six colours, giving it universal appeal worldwide. Pre-charged and ready to use (with its pack of monkeynuts connectors), the powermonkey classic is the perfect charger for any adventure.

Available in six colours including blue, pink, purple, silver, white and black

“ A remarkable piece of kit. We have just completed a five-week expedition crossing the Hardanger Glacier. This power source proved itself essential time after time. ”

**David Davenport,
Director of DXM Project
Management**

The solarmonkey and solarnut is our lightest and most versatile solar charger and lets adventurers charge their devices directly from the sun.

Whether you're on the beach or on an expedition across the desert, the solarmonkey and solarnut give instant power anywhere under the sun and if a sunny day turns cloudy, the solarnut will regulate the power flow so charging a device will not be affected. The solarnut can even swing into action as a stand-alone emergency charger.

WORLD'S SMALLEST USB CAR CHARGER MOTORMONKEY V2

“ We set out to make the lightest, smallest in-car charger in the world and our latest version means it's now possible to charge iPads while on the road. ”

**Jerry Ranger, CEO,
Powertraveller Ltd.**

The motormonkey is the world's smallest in-car charger and has been designed so it can be permanently connected in the cigarette lighter without draining the car's battery.

The unit is extremely compact and our latest model includes some clever features such as the self-sensing technology which automatically detects the voltage required meaning it can charge iPads as well as much smaller devices via the USB socket.

ADDITIONAL FEATURES

- Can charge iPads as well as much smaller 5v devices
- Incredibly small and compact
- Supplied with a USB charging retractable cable and motormonkey tips which means you can have one single charger which works with numerous devices
- Auto-off technology prevents overcharging and draining your car battery

USB socket enabling universal charging

Finished in tooled aluminium, motormonkey is built to last

 STARTMONKEY200**

“When a RIB won't start due to a flat battery and is three or four boats out on the pontoon, moving the boat or replacing the battery is a time-consuming and potentially dangerous task. We used the startmonkey200 on three to four occasions where boats had flat batteries and found it to be perfect for the job.”

Yamaha Motor (UK) Limited

Small and quick to use, the startmonkey200 can restart a standard 12v car battery between 15 and 20 times via the High Energy Dynamic Polymer Battery. It's truly unique in that, unlike traditional lead-acid battery starters, the startmonkey is ultra portable and compact which means it can be left in a glove compartment or boot until it's needed and, thanks to its low static waste, will retain 75% of its charge, even after a year without use.

Specifications	startmonkey200
Weight	660g
Dimensions	174 x 65 x 52mm

 STARTMONKEY400**

“ The RAC attends 500,000 battery-related call-outs each year. ”

RAC

The startmonkey400 is the bigger brother to the startmonkey200 and shares many of the same features such as a compact rugged design and low static waste.

The Startmonkey400 includes a larger high energy Dynamic Polymer battery meaning you can start a 12v car battery between 15 and 20 times. It can also work with much larger vehicles of up to 1600 Cold Cranking Amps and the heavy-duty crocodile clips and Voltmeter LCD display make it the perfect 'jump-start' system.

ADDITIONAL FEATURES

- Can restart a standard 12v (1600 Cold Cranking Amps) car battery 15 to 20 times
- Retains 75% of its charge – even after one year without use
- Can be charged via AC or in-car charger (both included)
- Packed with safety features including short-circuit protection and incorrect polarity protection
- Patented ground-breaking technology

WE CAN: OFFER BRANDED PRODUCTS & BESPOKE PACKAGING

We can work with you to create bespoke products and packaging that are specific to your own power needs – we can help develop exactly what you need, working to your specific requirements and pride ourselves on working to specific corporate guidelines.

We are always looking for new opportunities to expand into different markets and are open to new ventures, whether it be developing an existing Powertraveller product and packaging to your branding or creating a new product to fit your power needs.

By working with Powertraveller, you can.

Example only

We offer:

- Bespoke packaging
- Product development
- The ability to work to corporate guidelines
- Flexibility
- The ability to work to your power needs

case study: Canon Cameranut

Having spoken to many photographers who live and work in extreme and remote environments, our R&D team were asked to design, develop and manufacture a mobile camera charging pack which would give photographers true off-grid charging ability, from the minigorilla and solargorilla. We had to design a professional unit that can take the knocks of worldwide travel without any compromise in safety and charging capabilities. The Canon EOS camera range will be catered for with three different cradles. We are very proud to be working with such a recognised worldwide brand.

“ We are passionate about the use of advanced and emerging technologies to develop and apply intelligent power sources that embrace the future for renewable energy. ”

Jerry Ranger, CEO

WE ARE: POWERTRAVELLER

Our name may sound familiar – you may have seen our products on board a flight or in various airports around the world – but a vital part of our organisation is the people behind them.

Powertraveller’s vision is to push the possibilities of portable power so wherever our customers find themselves they can go further. Our culture is defined by R&D and innovation and a shared passion for technical excellence with a ‘we can’ approach to customer service amongst our team.

Our ‘rapid lifestyle’ approach to product development means we always have a range of new products in the pipeline and actively embrace customer feedback for the value it adds to our products.

A vital part of our organisation is our established manufacturing base in China which is run to the highest operational and ethical standards with a dedicated 80-strong team. Our expertise and professionalism ensure every product meets the exacting standards our customers expect.

A design team in the UK, engineering in China: a team built on innovation, design and quality, Powertraveller has developed some of the most innovative and technologically powered products in the world.

Established in 1986 as IDC Plugs Ltd., Powertraveller remains a privately owned company that retains its original focus on innovation, quality and customer service which are recognised through a number of international awards.

WE CAN: INNOVATE

Continuous innovation to meet emerging customer needs means we are always exploring new concepts and better ways to package portable power. We design, develop and test our products to destruction. Design is led from the UK with development and production in China, followed by extensive testing worldwide before our products reach your hands.

From original idea through to the packaged product on the shelf, we take a concept, develop assembly drawings and build prototypes and tooling before we commence the manufacturing process. From the lightmonkey to the silverback gorilla, there is an integrated look and feel throughout the range that immediately says Powertraveller.

Certification and standard compliance is obtained in countries around the world to ensure a truly global product range. The research and development process typically spans many months before the new product is ready to enter the marketing stage.

As we go to press, we are currently trialling the hotmonkey, a personalised heat system for hand, feet and body that will be powered by the powermonkey extreme with its unique thermostatic control system.

Emerging technologies

There is phenomenal 'natural' power in the world. Powertraveller is committed to researching ways to harness this power using emerging and new technologies including advances in materials science. Our vision is driven on the extremes of where we can take power – climate extremes: equalled power-to-weight ratio and technological extremes: using and developing the latest technologies.

The future of our R&D programme is around truly portable fuel cell technology, kinetic and inductive recharging technologies. Where it can be made lighter, faster or more efficient, we are working on it.

New technologies currently being researched by Powertraveller include methanol fuel cells, hydrogen fuel cells, wind power (code name 'blowmonkey' we are trying to harness wind power using a mobile turbine), inductive power (we plan to produce a portable charger that can charge devices wirelessly) and thermo-electric plates.

Product updates

We have developed some truly world-class products that we continue to improve, making them more efficient, lighter and more powerful. As new technologies become available Powertraveller is always making sure that existing products are still relevant. All our products are made using 'convergent technology and design criteria'. This means, for example, that the new tips provided with the minigorilla will also fit the first powermonkey and the powerchimp can be charged from the powergorilla.

Extending the life of a product is key to Powertraveller – we acted very quickly following the launch of Apple's iPad, producing a new gorilla-pad connector enabling the minigorilla and powergorilla to efficiently charge Apple's new product.

Our solar technology continues to develop and has certainly come of age with the balance of efficiency, cost, and weight and it is a very important part of the R&D programme. We are constantly improving our existing solar products and are about to launch our largest solar product – the solargorilla extreme.

* MPPT (Maximum Power Point Tracking) technology maximizes the solar panel's efficiency for any given weather condition and protects the battery from over-charging and excessive discharging. In low light conditions, this technology improves efficiency by up to 60%

case study: silverback gorilla

We meet a lot of people when we are travelling, from businessmen to photographers and explorers. When they find out what we do at Powertraveller, the one thing we always get asked is: "Can you make a battery with enough charge to run a laptop all day?"

This has been our inspiration and drive behind the silverback gorilla. We have developed a rechargeable battery, an Uninterrupted Power Supply (UPS) that is compatible with any household plug; a battery that is as environmentally friendly as possible. Not only can it be recharged but it is made from ultra High-Density Lithium Polymer. The result is lighter and far easier to recycle than the heavy lead battery equivalent.

After extensive research and development that included testing all the latest types of battery technology; charging and safety circuits, plus of course numerous casing designs to find the most ergonomic – we have developed the rechargeable battery that will run a laptop all day.

WE ARE: RESPONSIBLE

Powertraveller products are built to last, are capable of being used in extremes of temperature and are resistant to the elements and harsh handling – they have a very high number of recharge cycles negating the need for using disposable batteries. Our products are made using materials and components that can be reused or recycled.

In parallel to our focus on providing true off-grid power to the developed world, Powertraveller also makes its technology available to developing countries with the supply of products to Government, Non Government Organisations (NGOs), conservation charities and the military.

YOU CAN: TAKE SALES TO NEW HEIGHTS

The same vision, energy and attention to detail that goes into our product development is invested in ensuring Powertraveller products stand out from the crowd and connect with customers worldwide.

Central to this is the Powertraveller brand, recognisable from the packaging and Point of Sale (POS) to the website and advert in an in-flight magazine. Our approach ensures a consistent brand experience that customers respond to.

Customer service and endorsement

We are constantly delighted by the comments and feedback we get from our customers. Customers regularly write, email and send in pictures telling us how they use our products in real life – and we listen. Their testimonials and user case studies, including product field tests, are our greatest endorsement and an excellent source of product development ideas.

Award-winning products

We are proud to have a number of Awards to our name including the Queen's Award for Enterprise: Innovation and the red dot: design.

Powertraveller in the press

Our established relationships with the press ensure a high level of product reviews and exciting user stories in respected newspapers and magazines. Powertraveller products win Editors' Awards and are highly rated. We understand the importance of good publicity and how it can influence and drive sales and brand awareness.

Product information

We're developing more and more useful product information, not merely for the consumer, but for the retailer as well. We understand that you need to know not just the product features, but the benefits as well.

powertraveller.com

The website is the company's dynamic hub of information. It is regularly updated to deliver the latest product news, press reviews, insights into new products in development and a source for customers to purchase small additional items.

We understand the balance between our retail partners and online sales, so our website carries live links to all our distributors and retail partners, helping our customers to buy online and on the high street.

WE CAN: HELP YOU SELL

In-store training

If we've learnt one thing, it's the value that in-store training adds to the sales process. Knowledgeable staff who are confident discussing the features and benefits of our products are by far your greatest asset and we have invested heavily in creating and implementing in-store training programmes across the UK, Europe and beyond.

Free standing display units

Developed with the outdoor retailer very much in mind, Powertraveller's FSDUs incorporate minimal footprint, informative text panels and clear branding. Translated versions are also available for international retailers. Units are generally supplied free of charge and stand-fills can be tailored to suit the retailer's needs.

Brand ambassadors

From expeditions to the Gobi Desert, Everest summit attempts and Arctic expeditions – nobody tells our story quite as well as a real-life user. Our products have been used by some of the most interesting and 'extreme' users on the planet and we select the best for sponsorship, using their stories to great effect in our marketing.

Multi language brochures

To further help retail sales, we have produced a sales brochure in several languages that fully yet simply explains the functionality and capabilities of each product in the range.

Packaging

At the time of going to press, our product range is currently going through a comprehensive review. With its clean, crisp imagery and informative and descriptive text – our aim is for consumers to quickly and easily understand and appreciate the benefits of choosing a Powertraveller product.

YOU CAN: WORK WITH US WHEREVER YOU ARE IN THE WORLD

We supply our products worldwide to distributors, retailers and large organisations including high street stores and some of the world's best-known airlines. You can purchase our products ready packed in tough purpose-designed boxes, protected with clear plastic.

To ensure your products arrive in perfect condition, we have a meticulous quality control system in place, from the use of tamperproof packaging to tightly managed logistics.

We can offer:

- Low minimum orders
- Ability to supply in bulk, typically in multiples of 500 units
- Fast and reliable delivery
- International reach
- Multi-language product brochures

Designed and developed in the UK

Engineered and made in China

DAVID SHEPHERD WILDLIFE FOUNDATION

Powertraveller is proud to support the David Shepherd Wildlife Foundation (DSWF), saving critically endangered mammals in the wild. As part of Powertraveller's association with DSWF, we supply Gamerangers with powermonkey explorers to keep their mobile phones charged at all times while they are out on anti-poaching patrols.

“ With batteries always going dead, the powermonkey explorer just keeps our vital communication lines running on essential anti-poaching operations in the most extreme field work conditions. ”
